PROJECT LOG

Lolly – Emotional ML Chatbot
HERE TO HELP YOU OVERCOME YOUR EMOTIONS

By Latif Yahia
BEng (Hons) Software & Electronic Engineering

WHAT IS A LOLLY?

Lolly is an emotion-based chatbot that communicates to the user depending on the emotions detected through the user's facial expressions. Depending on what emotions are seen, Lolly will communicate to the user differently.
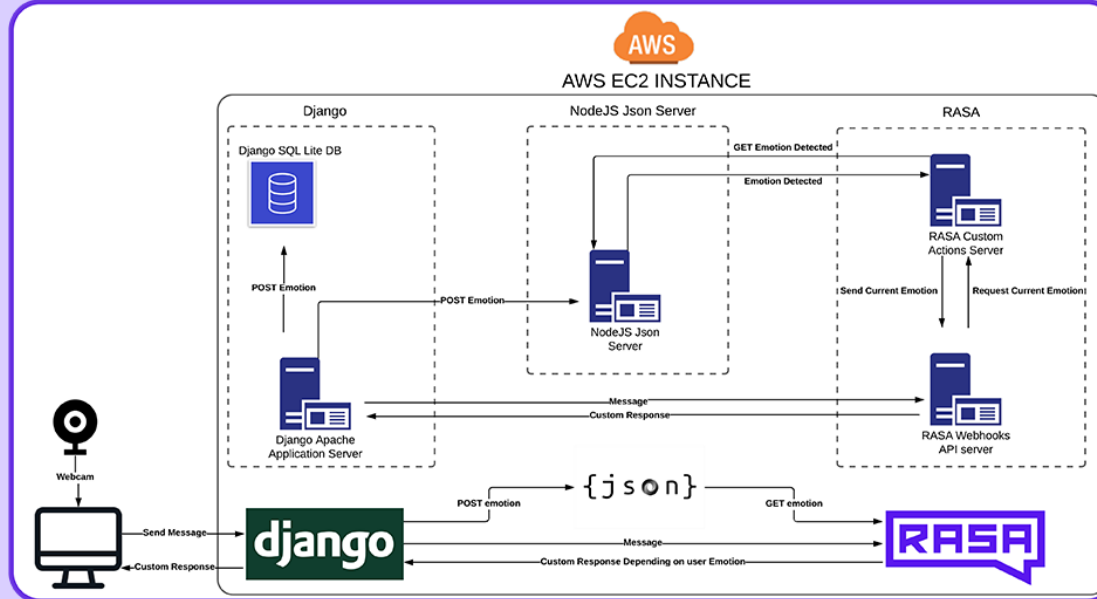

GOAL

Lolly's purpose is to help people overcome their emotions throughout the coronavirus lockdown. We know that people are on lockdown and find it hard to talk to other people about their feelings. Lolly is here for anyone to talk to about anything.
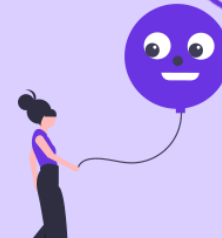

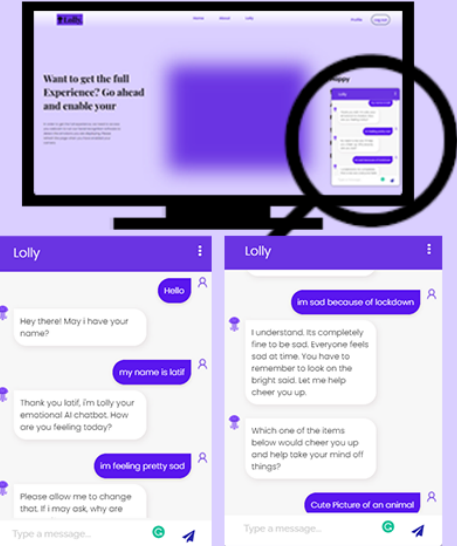

ARCHITECTURE DIAGRAM

AWS EC2 INSTANCE

Django — Django SQL Lite DB — POST Emotion — Django Apache Application Server

NodeJS Json Server — GET Emotion Detected — Emotion Detected

RASA — RASA Custom Actions Server — Send Current Emotion — Request Current Emotion — RASA Webhooks API server
